This agreement is entered into by Nueces County Water Control and Improvement District No. 3 (District) and _____ (Customer), for potable water service at the above address.

The District is responsible for protecting the drinking water supply from contamination or pollution which could result from improper private water system construction or configuration. The District enforces these rules to ensure public health and welfare.

RESTRICTIONS- The following unacceptable practices are prohibited by State regulations:

- No direct connection between the public drinking water supply and a potential source of contamination is permitted. Potential sources of contamination shall be isolated from the public water system by an air-gap or an appropriate backflow prevention device.
- No cross-connection between the public drinking water supply and a private water system, including wells, is permitted. These potential threats to the public drinking water supply shall be eliminated at the service connection by the installation of an air-gap or a reduced pressure zone backflow prevention device.
- No connection which allows water to be returned to the public drinking water supply is permitted.
- No pipe or pipe fitting which contains more than 0.25% lead may be used for the installation or repair of plumbing at any connection which provides water for human use.
- No solder or flux which contains more than 0.2% lead can be used for the installation or repair of plumbing at any connection which provides water for human use.

The Customer is solely responsible for all water system appurtenances downstream of the meter. The customer shall install at his own expense a service line from the water meter to the point of use, including any customer service isolation valves and other equipment as may be specified by the District.

By execution of this service agreement, the Customer agrees to all terms and policies of the District. If the Customer fails to comply with the District Policies, the District shall, at its option, terminate service or properly install, test and maintain an appropriate backflow prevention device at the service connection. Copies of all testing and maintenance records shall be provided to the District. Any expense associated with the enforcement of this agreement shall be billed to the Customer.
